

Team Page and Login Restyling - BA Requirements

Project Team 39 | BA: Abdifatah Hashi

What this task covers

This is for the Demo Sprint. My part is to set out what needs to be shown on the Team Page and make it clear what can and cannot change on the Login page.

Login page: styling only. The current login/authentication logic, validation and session behaviour should stay the same. The task is only to change how the page looks.

Team name: The Team Page should clearly show the team name at the top of the page.

Team Page fields

Name

- Each team member should have their name clearly shown.
- The name should not be left blank for a team member being displayed.
- Long names should wrap properly and not mess up the layout.

Photo

- Each team member can have a photo shown on their card.
- Photos should be a consistent size and should not look stretched.
- If a photo is missing or does not load, the page should still work and a placeholder or initials can be used.

Role

- Each team member should have their project role shown near their name.
- Roles should be formatted in the same way for everyone.
- Longer role names should wrap properly and not break the card.

Blurb

- Each team member can have a short blurb about themselves.
- The blurb should support more than one line.
- Longer blurbs should wrap properly and should not overlap other content.

General Team Page display

- All team member cards should use the same general layout.
- Name, photo, role and blurb should be easy to tell apart.
- There should be enough spacing so the page does not look crowded.
- The page should still be readable on smaller screens.
- Missing information should not make the page crash or look broken.

Login page requirements

- Only the visual styling of the Login page should be changed.
- Do not change the existing authentication logic, validation or session behaviour.
- The existing email field, password field and Login button should still be clear and easy to use.
- Existing error or validation messages should still be visible after the styling changes.
- The Login page should use spacing and styling that matches the rest of the updated design.
- The Login page should still be usable on a smaller screen.

Edge cases to keep in mind

- A team member has no photo.
- A photo fails to load.
- A team member has a long name.
- A role title is longer than normal.
- A blurb is much longer than the others.
- Some team member information is missing.
- The number of team members changes.
- The Team Page is viewed on a smaller screen.
- A Login error or validation message appears.
- The Login page is loading or processing a login.
- Styling changes accidentally affect the existing login/authentication behaviour.

What I will check in the UX design

- The Team Page includes name, photo, role and blurb.
- The layout stays readable when text is longer or a photo is missing.
- The Login changes are visual only.
- The current Login fields, button and messages are still usable.
- The design is consistent between the Team Page and Login page.
